Solana Speedrun - Eclipse Track

Eclipse was built to enable builders to push truly scalable apps onchain.

Eclipse is Ethereum's first SVM L2. By bringing Solana to Ethereum, builders will get to experience Ethereum's liquidity with Solana's speed. Get the best of both worlds today.

Eclipse is uniquely positioned to be the gaming hub of Ethereum by utilizing the performance of the SVM and a turbo-charged sequencer that will enable builders to build scalable fully onchain games.

Learn more about Eclipse, and our developer resources here.

Twitter: https://x.com/EclipseFND

Eclipse Track Description: Use your creativity to build a project with viral effects, ideally with a social element to it. Can be degenerate, can be not (although the market seems to like degenerate games).

Bonus points for the type of games that will get CT going and will bring users a ton of fun/speculation.

Technical Requirements: Deploy on Eclipse devnet - the game does not have to be fully onchain but some components/assets have to be deployed on Eclipse

Prizes: $1K
-$500 for each of two winners
